

Homework #4

- Do a Brute Force search to find a parse tree for the input int / int . Use top-down approach meaning you begin with the start rule (the first rule) and find a left derivation. When choosing which rule to use in a derivation go in order of the rules. The int terminal is an integer literal.

$$\langle E \rangle ::= \langle T \rangle - \langle E \rangle \mid \langle T \rangle$$

$$\langle T \rangle ::= (\langle E \rangle) \mid \text{int} \mid \text{int} / \langle T \rangle$$

$$\langle E \rangle \rightarrow \langle T \rangle - \langle E \rangle \rightarrow \text{int} - \langle E \rangle \quad \times$$

$$\rightarrow \langle T \rangle \rightarrow (\langle E \rangle) \quad \times$$

$$\rightarrow \text{int} \quad \times$$

$$\rightarrow \text{int} / \langle T \rangle \rightarrow \text{int} / (\langle E \rangle) \quad \times$$

$$\rightarrow \text{int} / \text{int} \quad \checkmark$$

- Compute the FIRST sets for the following. Compute follow sets as well for extra credit.

$$\langle A \rangle ::= \langle A \rangle \langle A \rangle ' + ' \mid \langle A \rangle \langle A \rangle ' * ' \mid a$$

$$\text{First}(A) = \{a\}$$

$$\text{First}(+) = \{+\}$$

$$\text{First}(*) = \{*\}$$

$$\text{First}(a) = \{a\}$$

$$\text{Follow}(A) = \{a, +, *, \$\}$$

③

I

$$S \rightarrow 0S1$$

$$S \rightarrow 01$$

$$S \rightarrow 0Y$$

$$Y \rightarrow S1$$

$$Y \rightarrow 1$$

	0	1	\$
S	0Y		
Y	S1	1	

II

$$S \rightarrow +SS \mid *SS \mid a$$

	+	*	a	\$
S	+SS	*SS	a	

III

$$S \rightarrow S(S)S \mid \lambda$$

$$S \rightarrow (S)S$$

$$\rightarrow \lambda$$

	()	\$
S	(S)S	λ	λ

④

$$\langle X \rangle ::= (\langle P \rangle)$$

$$\langle P \rangle ::= \langle Z \rangle \langle P \rangle \mid \langle Z \rangle$$

$$\langle Z \rangle ::= 0 \mid 1$$

$$X \rightarrow (P)$$

$$P \rightarrow ZY$$

$$Y \rightarrow P$$

$$\rightarrow \lambda$$

$$Z \rightarrow 0$$

$$\rightarrow 1$$

	0	1	()	\$
X			(P)		
P	ZY	ZY			
Y	P	P		λ	
Z	0	1			

5. The Following is a grammar describes a language for regular expressions over symbols a and b; the language uses + - sign in place of a | - sign for union. | - sign is part of BNF Syntax, + part language

$\langle r_{expr} \rangle ::= \langle r_{expr} \rangle + \langle r_{term} \rangle \mid \langle r_{term} \rangle$
 $\langle r_{term} \rangle ::= \langle r_{term} \rangle \langle r_{factor} \rangle \mid \langle r_{factor} \rangle$
 $\langle r_{factor} \rangle ::= \langle r_{factor} \rangle * \mid \langle r_{primary} \rangle$
 $\langle r_{primary} \rangle ::= a \mid b$

$r_{expr} \rightarrow r_{term} X$

$X \rightarrow '+' r_{term} X$

$X \rightarrow \lambda$

$r_{term} \rightarrow r_{factor} Y$

$Y \rightarrow r_{factor} Y$

$Y \rightarrow \lambda$

$r_{factor} \rightarrow r_{primary} Z$

$Z \rightarrow * Z$

$Z \rightarrow \lambda$

$r_{primary} \rightarrow a$

$r_{primary} \rightarrow b$

	+	*	a	b	#
$\langle r_{expr} \rangle$ X	$+ r_{term} X$		$r_{term} X$	$r_{term} X$	λ
$\langle r_{term} \rangle$ Y	λ		r_{factor}	r_{factor}	λ
$\langle r_{factor} \rangle$ Z		$* Z$	$r_{primary} Z$	$r_{primary} Z$	λ
$\langle r_{primary} \rangle$			a	b	

$first(r_{expr}) = \{a, b\}$

$first(X) = \{+\} \cup \{\epsilon\}$

$first(r_{term}) = \{a, b\}$

$first(Y) = \{a, b\} \cup \{+, \epsilon\}$

$first(r_{factor}) = \{a, b\}$

$first(Z) = \{*\} \cup \{\epsilon\}$

$first(r_{primary}) = \{a\} \cup \{b\}$
